Driver assistance systems for extra safety on the road

All new mobile crane models are equipped with driver assistance systems that support the crane driver with additional „eyes“. They scan the environment and warn the crane driver to prevent accidents.

Des systèmes d'assistance à la conduite pour une sécurité routière renforcée

Tous les nouveaux types de grues mobiles sont équipés de systèmes d'assistance à la conduite qui aident le grutier avec des « yeux » supplémentaires. Ils balayent l'environnement et avertissent le grutier afin d'éviter les accidents.

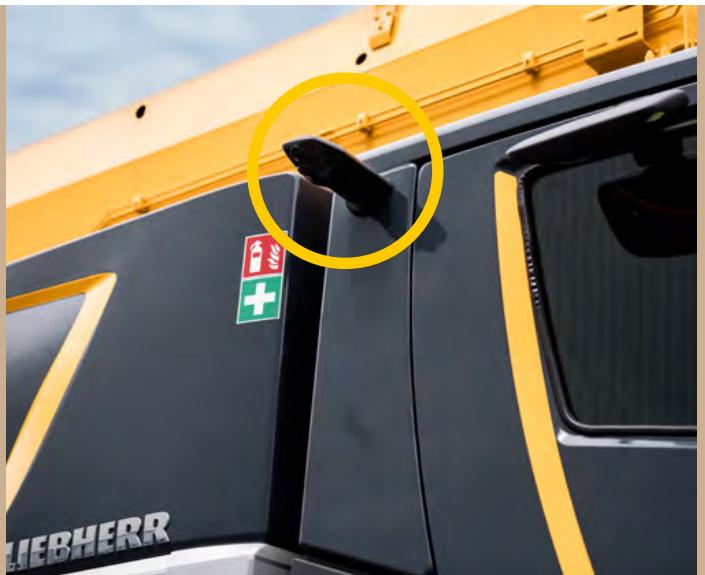

Blind Spot Information System

The Blind Spot Information System (BSIS) is also known as Blind Spot Assist or Turn Assist. The camera wing monitors the entire side area of the crane. A traffic light in the driver's cab emits a visual and acoustic warning signal in the event of danger. The crane operator can thus localise the hazardous situation immediately and assess it better. As an option, a monitor provides the driver with a better view and also visually displays the reason for the warning.

Assistant d'angle mort

Le « Blind Spot Information System » (BSIS) est également appelé assistant d'angle mort ou assistant virage. La « caméra-wing » surveille alors toute la zone latérale de la grue. Un feu de signalisation dans la cabine du grutier envoie un signal d'avertissement visuel et sonore en cas de danger. Ainsi, le grutier peut immédiatement localiser la situation dangereuse et mieux l'évaluer. En option, un moniteur offre une meilleure visibilité au conducteur et permet de transmettre visuellement l'origine de l'avertissement.

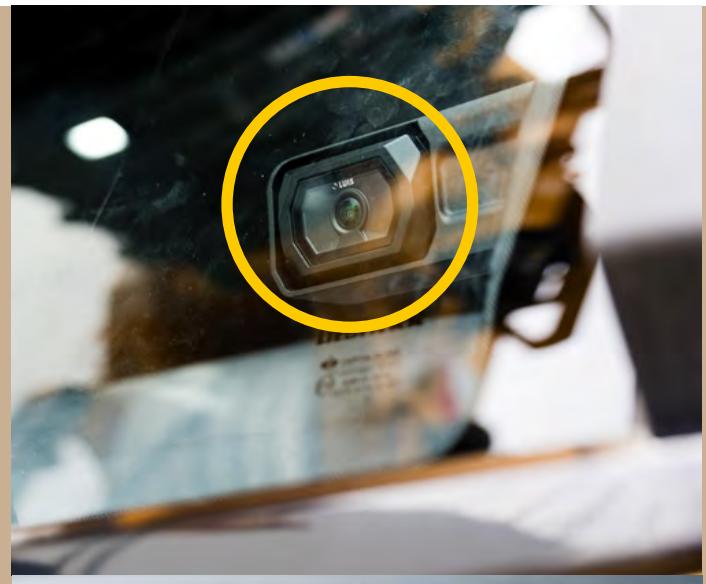

Moving Off Information System

If there is a person in front of the crane, the Moving Off Information System (MOIS) comes into play. Two digital cameras on the left and right of the front windshield scan the area and warn the crane driver both visually and acoustically.

Le système d'information d'approche

Si une personne se trouve devant la grue, le système d'information d'approche « Moving Off Information System » (MOIS) entre en jeu. Deux caméras numériques placées à gauche et à droite du pare-brise balayent la zone et avertissent également le conducteur par des signaux visuels et acoustiques.

Remarks

1. The lifting capacities do not exceed 85 % of the tipping load according to ASME B 30.5. The crane's structural steelwork is in accordance with EN 13000 and ASME B 30.5.
2. For the calculation of the load charts at least a wind speed of 30 ft/s (9 m/s, 20 mph) and regarding the load a sail area of 1 m² per ton load and a wind resistance coefficient of 1.2 on the load have been taken into account. For lifting of loads with large sail areas and/or high wind resistance coefficients the maximum wind speed as stated in the load charts has to be reduced.
3. The lifting capacities stated are valid for lifting operation only (corresponding with crane classification according to ISO 4301-1, crane group A1).
4. Lifting capacities are given in kip.
5. The weight of the hook blocks and hooks is part of the load and therefore it must be deducted from the lifting capacities.
6. Working radii are measured from the slewing centre.
7. The stated lengths of the telescopic boom are maximum values and may deviate slightly.
8. The lifting capacities given for the telescopic boom apply if the folding jib is removed.
9. Subject to modification of lifting capacities.
10. Lifting capacities above 189,600 lb/257,700 lb only with additional pulley block/special equipment.
11. The data of this brochure serves only for general information. All information is provided without warranty. Instructions for the correct commissioning of the crane please take from the operation manual and the load chart book.
12. The illustrations in this brochure may feature accessories and special equipment not included in the standard scope of delivery.

Remarques

1. La capacité de charge ne doit pas dépasser 85 % de la charge de basculement conformément à ASME B 30.5. La structure métallique de la grue est conforme à EN 13000 et ASME B 30.5.
2. Une vitesse de vent de 30 ft/s (9 m/s, 20 mph) minimum, une surface de prise au vent de 1 m² par tonne ainsi qu'un coefficient de résistance au vent de la charge 1,2 sont pris en compte pour le calcul des tableaux de charge. Lorsque des charges ayant une surface de prise au vent et/ou un coefficient de résistance au vent plus élevé(s) sont levées, la vitesse de vent maximale indiquée dans les tableaux de charge doit être réduite.
3. Forces de levage pour application de grue de montage (correspond à la classification de grues selon ISO 4301-1, groupe de grues A1).
4. Les charges sont indiquées en kip.
5. Le poids du crochet de levage resp. de la moulle à crochet est une partie de la charge et doit donc être déduit de la capacité de charge.
6. Les portées sont calculées à partir de l'axe de rotation.
7. Les longueurs indiquées pour la flèche télescopique sont des valeurs maximales et peuvent légèrement varier dans la réalité.
8. Les charges indiquées pour la flèche télescopique sont valables lorsque la fléchette pliante est démontée.
9. Charges données sous réserve de modification.
10. Forces de levage plus de 189,600 lb/257,700 lb seulement avec moulle additionnel/équipement supplémentaire.
11. Les données de cette brochure sont données à titre informatif. Ces renseignements sont sans garantie. Les consignes relatives à la bonne mise en service de la grue sont disponibles dans le manuel d'utilisation et le manuel de tableaux de charge.
12. Les figures contiennent également des accessoires et des équipements spéciaux non inclus de série dans la livraison.
