

KOBELCO

7450

Hydraulic Crawler Crane

Puts big lifts within reach

Luffing Jib

Working ranges

Unbeatable lifting capacity

The lift enhancer attachment endows the 7450 with its unbeatable lifting capacity for crawler mounted cranes.

Fast assembly and disassembly

The whole machine is of modular construction which permits very fast assembly and disassembly. A hydraulic pin-jacking system is incorporated to make the job even easier.

Precisely controllable hydraulic drum drive

The 7450 uses a hydraulic drum drive to give precise control of lifting speed according to the control lever position and imparting particularly smooth lifting characteristics.

Spacious, well planned cab for comfortable operation

The operator's cab is well ventilated and comfortably laid out, being separated from the machinery compartment to prevent the intrusion of noise and vibration.

New lifting and tilting cab

1.5m of vertical adjustment is built into the cab which can also be tilted backwards for optimum operating visibility. A high-backed reclining seat is fitted in the cab with forward and backward adjustment to suit the most comfortable working position of each operator.

Versatile operation

A wide variety of attachments makes the 7450 extremely versatile, with fittings for boom, fixed jib and luffing jib all available.

Low fuel consumption

The turbocharged, direct injection diesel engine was particularly selected for its fuel economy, and delivers power on demand with low fuel consumption.

Consistently powerful and reliable lifting performance

From hook to tracks, the 7450 is engineered for top class lifting performance, easy maintenance and operating safety.

- Notes:
1. Operating radius is the horizontal distance from the centerline through the center of gravity of the load.
 2. Ratings do not exceed 75% of tipping load. Deduct weight of hook block(s), slings and all other load handling accessories from main boom or jib ratings shown.
 3. Ratings shown are based on freely suspended loads and make no allowance for such factors as wind effect on lifted load, out-of-level ground conditions, operating speeds or any other condition that could be detrimental to the safe operation of this equipment. The operator, therefore, has the responsibility to judge the existing conditions and reduce lifted loads and operating speeds accordingly.
 4. No operation is possible in the ranges indicated by blank spaces in the chart.
 5. Boom inserts and guy cables must be arranged as shown in the "Owner's Manual".

6. When boom is equipped with jib, main hook ratings are determined by considering weight of jib and jib hook block. To obtain actual hoistable loads, deduct weight of main hook block, slings and all other load handling accessories from ratings shown. Erection weight (10t) is required when boom length is 91.44m or longer.
7. Actual hoistable loads using the luffing jib must be calculated by deducting the weight of auxiliary hook block, slings and all other load handling accessories from ratings shown.
8. Luffing jib ratings are based on a main boom angle of 85°. Erection weight (10t) is required when boom length is 64.01m or longer.
9. When boom is equipped with jib, main hook ratings are determined by considering weight of jib and jib hook block. To obtain actual hoistable loads, deduct weight of main hook block, slings and all other load handling accessories from ratings shown.

Lifting capacity

Rated crane loads in metric ton—main

Operation of this equipment in excess of the rated loads or disregard of operating instructions voids the warranty.

10. Actual hoistable loads using the fixed jib must be calculated by deducting the weight of main and auxiliary hook blocks, slings and all other load handling accessories from ratings shown.

11. During heavy lifting operation, a center hitch is necessary if boom length exceeds 91.44m.

12. During super heavy lifting operation, the same mast can be used as that used during heavy lifting, but a special mast insert must be used to obtain the necessary mast length. In addition, a lift enhancer is connected to the back of the crawler for added stability.

13. Generally booms must be erected over end of crawlers.

14. Hook block weight (ton)

Specifications

		Crane use		Tower crane use (Luffing jib)	
Performance					
Max. lifting capacity	ton x m	18.29m heavy duty boom 450 x 5.8		99 x 16 (33.53m boom + 24.38m jib)	
		18.29m light duty boom 230 x 11.1			
Base boom length	m	18.29 (heavy duty boom)		33.53 (luffing boom)	
		18.29 (light duty boom)			
Max. main boom length	m	42.67 (heavy duty boom) 97.54 (light duty boom)		70.10	
Max. jib length	m	33.53 (light duty boom use)		67.06	
Max. boom length with jib	m	85.34 + 33.53		70.10 + 67.06	
Main hook line speed (High/Low)	m/min	59/1.00			
Aux. hook line speed (High/Low)	m/min	59/1.00			
Boom hoist line speed	m/min	25			
Boom lowering line speed	m/min	25			
Jib hoist line speed	m/min	35			
Jib lowering line speed	m/min	35			
Swing speed	rpm	1.0			
Travel speed (High/Low)	km/h	0.6/1.2			
Gradability (unloaded)	%	30 (16.7°)			
Operating weight	ton	335 (18.29m heavy duty boom)		420 (70.10m boom + 67.06m jib)	
Ground pressure (unloaded)	kg/cm ²	1.07 (18.29m heavy duty boom)		1.3 (70.10m boom + 67.06m jib)	
Wire rope					
Main hoist wire rope dia.	mm	32			
Aux. hoist wire rope dia.	mm	32			
Wire rope dia for boom hoist use (2 x 12 lines)	mm	28			
Boom guy line	mm	44			
Wire rope dia for jib hoist use (2 x 8 lines)	mm	28			
Jib guy line (4-line type)	mm	36 (Jib side) 36 (Main boom side)			
Drive device					
Engine	Model	CUMMINS KTA-1150-C600			
	Type	4-stroke, water-cooled, direct injection, diesel engine			
	Power output PS/rpm	609/2,100			
Fuel tank capacity	ℓ	front 390		rear 550	

Notes: 1. Line speed figures are for one drum.

2. The main hoist, auxiliary hoist, boom hoist and jib hoist travel speeds vary according to the load being lifted.
