Load hoist drums contain a pilot-controlled bi-directional axial piston motor and a planetary gear-reduction unit to provide positive control under all load conditions.

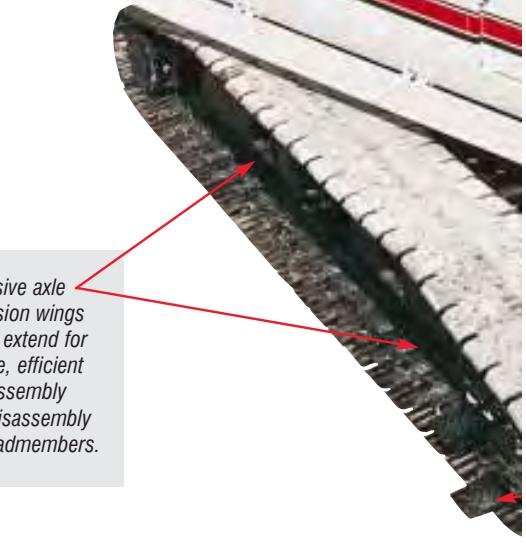

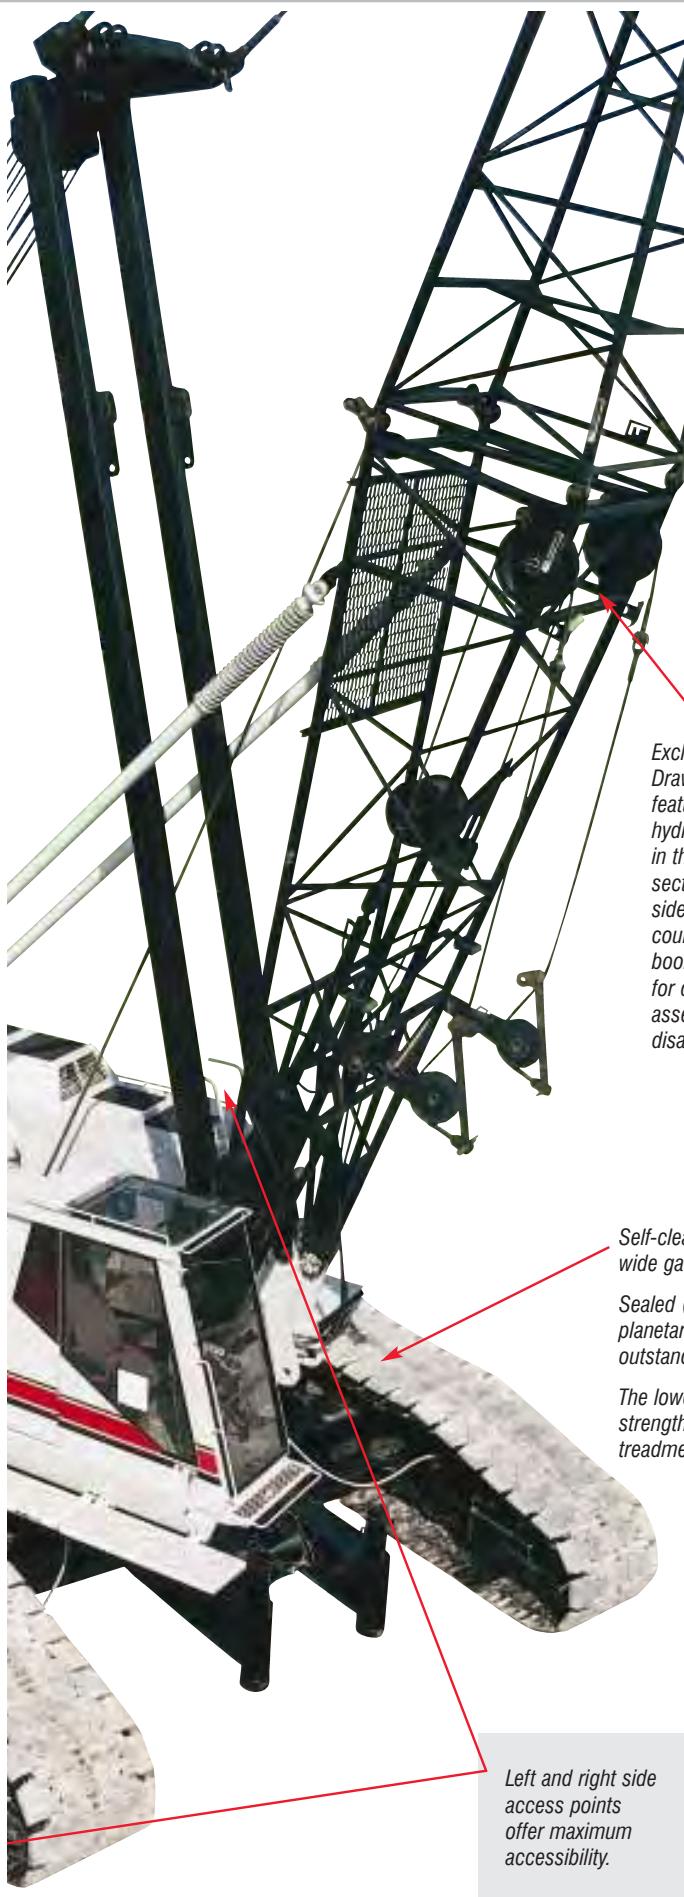

Large, swing-out doors provide outstanding access to the engine and hydraulic components for easy maintenance.

Non-slip safety strips and grated catwalks provide sure-footed access to the crane upper.

Exclusive axle extension wings easily extend for simple, efficient self-assembly and disassembly of treadmembers.

The boom top section features **standard pin-on points** for adding optional attachments such as a fixed jib, tip extension and adapters for universal pile driving leads.

Self-cleaning 36" (.91 m) track shoes form an extra wide gauge of 14' 6" (4.42 m).

Sealed (oil-filled) track rollers, idler and drive planetaries and compact hydrostatic drives add up to outstanding reliability and maintenance-free operation.

The lower structure is made up of an all-welded, high strength, alloy steel carbody and precision machined treadmembers.

Left and right side access points offer maximum accessibility.

Enjoy the versatility of both angle and tube boom

Customize your crane and get the best of both worlds!

Ideally suited for lift crane work and combination lift/duty cycle requirements, the LS-218H II, with **tubular boom**, offers greater lifting capacities and the longest boom and boom/jib combination in its class.

The **optional 40'-150' (12.19 - 45.72 m) angle boom**, the most rugged and robust angle boom available, is a top notch performer in dragline, clamshell, pile driving and other severe duty cycle applications. outfitting the angle boom with the optional live mast makes for fast assembly and disassembly.

Head machinery includes standard lift crane sheaves with optional wide mouth sheaves available for duty cycle.

The boom top section features **standard pin-on points** for an optional 5' (1.5 m) tip extension in place of jib for providing clearance between working hoist lines.

To allow for pile driving, the LS-218H II is equipped with standard **pile driving lead connection points** on the boom top section as well as an optional pile driving lead adapter.

Optional **third hoist drum** is pinned to the front of the upper frame and has free-spooling capability for pile-driving applications.

Maximum height of carbody when resting on pontoons is an impressive 42" (1.07 m)

Bulletproof hydraulics and a strong power plant

The HYLAB Series state-of-the-art variable displacement hydraulic power system has earned a job-proven reputation of **bullet-proof reliability**. Ask any owner.

The hoist drums and boom hoist drum are hydraulically-powered and fully independent. The hoist drums feature power up/down, mechanical drum pawls, grooved laggings and electronic drum rotation indicators.

Optional third drum, front-mounted, is available with controlled free-spooling option, for pile-driving requirements.

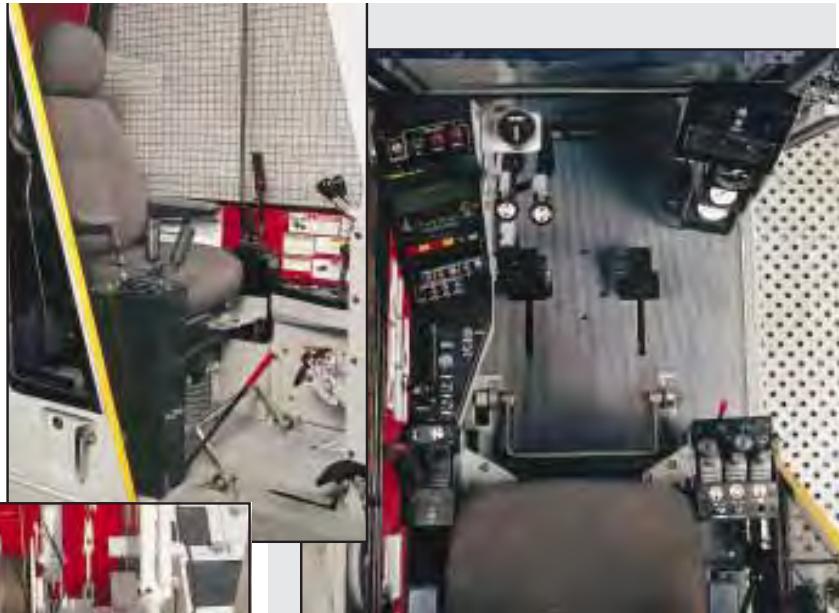

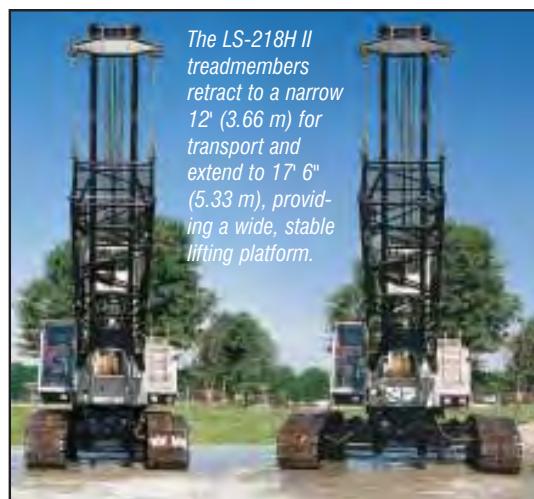

A state-of-the-art hydraulic system with counterbalance valves provides positive, smooth and precise load control.

The LS-218H II has a “**Fine Inching**” control mode for super precise control of load lowering, hoisting, boom hoist and travel.

This hydraulic hoist system features **free-fall control** operation or **automatic brake mode (power up/down)** for fast, efficient and safe operation.

The hydraulically-powered **free swing** provides smooth rotation, 360° fingertip-applied swing brake, two position house lock, two speed swing and an audio/visual swing alarm.

Powered by the **biggest and most quiet engine in its class**, the Mitsubishi engine is fuel efficient and has proven to be very reliable. It has a high cooling capacity and provides **high line speeds at higher line pulls**.

Fast assembly & disassembly

Link-Belt's optional **Quick Draw™** feature dramatically simplifies self-assembly, disassembly and load-out. Hydraulic cylinders in the boom base section pick up and handle the boom extensions, counterweights and treadmembers.

The exclusive, **all-hydraulic counterweight** removal system easily handles both counterweights (25,350 lbs (11 499 kg) each).

On the new LS-218H II, you can remove both counterweights, both sideframes and catwalks, pin the live mast and gantry, and be ready to load out. Reverse the process and be ready to stab boom in 45 minutes.

Link-Belt's optional Quick Draw system simplifies assembly, disassembly and counterweight removal

The LS-218H II is big, fast and strong with greater reach and capacities

The best lattice boom crawler crane in its class is even better. It can **outpick the competition** virtually everywhere on the chart. The LS-218H II also has **blocked over-end capacities**, challenging higher rated capacity cranes.

Available attachments provide strength and versatility

Conventional open throat boom

- 40' + 230' (12.19 - 70.10 m) conventional tube boom
- 40' + 150' (12.19 - 45.72 m) angle boom
- Using pin-connected sections and open throat top section, the LS-218H II provides the longest boom lengths in this machine class.
- Main chord members are made with 100,000 psi yield material with high strength lattice.
- Boom suspension is achieved through 10-part boom hoist reeving with dual pendant ropes.
- Standard equipment deflector rollers protect lattice sections from wire rope scuffing.

Auxiliary 5' (1.5 m) tip extension

- Optional — designed to provide clearance between two working hoist lines

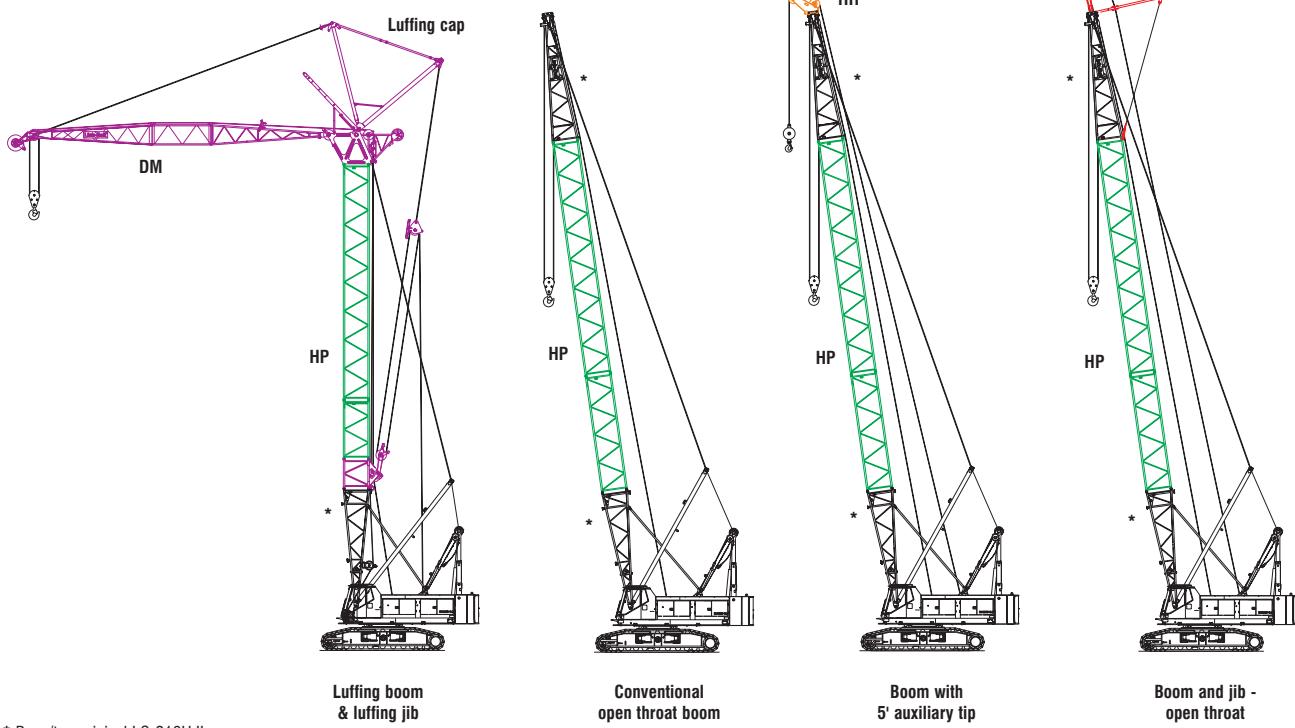

Boom and jib — open throat

- 190' + 75' (57.91 m + 22.86 m) tube boom + fixed jib
- 150' + 60' (45.72 + 18.29 m) angle boom + fixed jib
- Jib is common to other Link-Belt models.

Luffing boom attachment

- 140' + 140' (42.67 + 42.67 m) luffing boom + luffing jib
- Conventional boom on LS-218H II also serves as luffing boom
- Luffing attachment for the LS-218H II is the latest design with luffing jib reeving anchored off the luffing boom to keep reeving down low within operator's view — easy to assemble.
- Top section assembly of luffer transports as one piece and makes for fast, easy assembly to the luffing jib.
- This attachment flexibility and simplicity makes the LS-218H II — conventional or with luffing attachment — the first machine of choice to go out of the yard and to the job!

All boom sections are manufactured in Lexington, Kentucky for fast, easy service, parts and replacement.

! WARNING

READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUALS AND THE FOLLOWING INSTRUCTIONS AND CHART VALUES BEFORE OPERATING THE CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT.

OPERATING INSTRUCTIONS

GENERAL:

1. Rated lifting capacities in pounds as shown on lift charts pertain to this crane as originally manufactured and normally equipped. Modifications to the crane or use of optional equipment other than that specified can result in a reduction of capacity.
2. Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this crane must be in compliance with the information in the Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor.
3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards Institute (ANSI) safety standards for cranes.
4. All capacities listed in this book are in compliance with ASME/ANSI B30.5c-1998, SAE J987-April 1994, and SAE J-765 October 1990.

LIFT CRANE OPERATION:

1. Capacities shown are in pounds and are not more than 75% of the tipping loads with the crane standing level on firm supporting surface. A deduction must be made from these capacities for weight of hook block, hook ball, sling, grapple, etc. When using main hook while jib is attached, reduce capacities by values shown on Capacity Deductions For Lifting Off Main Boom Hook With Jib Installed. When using main hook while 5 foot tip extension or pile driver lead adapter is attached, reduce capacities by values shown on Capacity Deductions For Lifting Off Main Boom Hook With 5 Foot Tip Extension or Pile Driver Lead Adapter Installed. See Operator's Manual for all limitations when raising or lowering attachment.
2. The crane capacities in the shaded areas are based on structural strength. The crane capacities in the non-shaded areas are based on stability.
3. For recommended reeving, parts of line, wire rope type, and wire rope inspection, see Wire Rope Capacity Chart, Operator's Manual, and Parts Manual. Rated lifting capacities are based on correct reeving. Deduction must be made for excessive reeving. Any reeving over minimum required (see Wire Rope Capacity Chart) is considered excessive and must be accounted for when making lifts. Use Working Range Diagram to estimate the extra feet of rope. See Wire Rope Capacity for the weight to deduct for each extra foot of wire rope before attempting to lift a load.
4. Rated lifting capacities in this Crane Rating Manual are based on freely suspended loads and make no allowances for such factors as the effect of ground conditions and operating speeds. The operator shall therefore reduce load ratings in order to take these conditions into account.
5. Rated lifting capacities do not account for the effects of wind on a suspended load or boom.

Lifting capacities should be considered acceptable for wind speeds less than 20 mph and appropriately reduced for wind speeds greater than 20 mph. (See General Wind Restrictions Guide.)

6. The capacities listed are for the crane equipped with or without live mast and with the gantry in the raised position.
7. The least stable rated condition is over the side.
8. Booms should be erected and lowered over the end for maximum stability. See Liftoff Capabilities before erecting or lowering boom.
9. Do not operate at radii and boom lengths where the Crane Rating Manual lists no capacity. Do not use longer booms or jibs than those listed in this Crane Rating Manual. Any of the above can cause a tipping condition, or boom and jib failure.
10. These capacities apply only to the crane as originally manufactured and normally equipped by Link-Belt Construction Equipment Company.

FOR OVER END BLOCKED CAPACITIES ONLY:

1. These capacities can be lifted over either end with the crane standing level on a firm supporting surface with adequate blocking placed under the tread member sprockets/idlers, to prevent rocking.
2. Do not travel with a load.

TRAVELING WITH A LOAD:

1. All 360° Rotation Capacities listed in this Crane Rating Manual are pick and carry capacities.
2. The boom must be pointing straight over one end of the crawler lower. If the load was lifted over the side, swing the load over the end and/or if the load was lifted at a long radius and the load is at or near capacity for that radius, boom up to obtain a greater lifting capacity before beginning travel.
3. Engage the swing lock and apply swing brake.
4. Travel slowly and cautiously on a firm and level-supporting surface.

DEFINITIONS:

1. Load Radius: Horizontal distance from a projection of the axis of rotation to the supporting surface, before loading, to the center of the vertical hoist line or tackle with load applied.
2. Boom Angle: The angle between the boom base section and horizontal with freely suspended load at the rated radius.
3. Working Area: Area measured in a circular arc about the centerline of rotation as shown on the Working Area Diagram.
4. Freely Suspended Load: Load hanging free with no direct external force applied except by the hoist line.
5. Side Load: Horizontal side force applied to the lifted load either on the ground or in the air.

WORKING AREAS

GENERAL WIND RESTRICTIONS GUIDE

WARNING

Failure to follow these wind speed restrictions may result in structural failure of the boom, which would cause property damage and/or bodily injury.

1. The effects of the wind force on the hook load are the responsibility of the user and are not taken into account. When hoisting any load in windy conditions, the load wind area and load controllability must be considered for safe crane operation.
2. Wind speed is to be determined at the boom top section.

2. Capacities are based on 75% of minimum tipping loads for dragline; 67.5% for clamshell.
3. Capacities are maximum recommended by PCSA Standard #4. Operator must make allowances for soft or uneven supporting surfaces, rapid cycle operations, bucket suction, or other unfavorable conditions which may require smaller buckets for most efficient operation.
4. Weight of bucket plus load, must not exceed these capacities.
5. Dragline operation is not recommended with boom angles less than 35°.
6. Boom length for dragline/clamshell attachment operation should not exceed 100 ft.

WORKING RANGE DIAGRAM

40' TO 150' MAIN BOOM

Maximum Boom Angle
See Note 2.

Notes:

1. Boom geometry shown is for unloaded condition and crane standing level on firm supporting surface. Boom deflection, subsequent radius, and boom angle change must be accounted for when applying load to hook.
2. Maximum and minimum boom angles are equal to the values listed in the capacity chart for each boom length.

CAPACITY DEDUCTIONS FOR LIFTING OFF MAIN BOOM HOOK WITH JIB INSTALLED

When using main boom hook, while jib is attached, reduce boom capacities by the values in the following chart:

Jib Length (ft.)	Capacity Deduction (lb)
30	2,000
45	2,400
60	3,200

CAPACITY DEDUCTIONS FOR LIFTING OFF MAIN BOOM HOOK WITH 5 FOOT TIP EXTENSION OR PILE DRIVER LEAD ADAPTERS INSTALLED

When using main boom hook, while 5 foot tip extension or pile driver lead adapter is attached, reduce boom capacities by the values in the following chart:

Extension/Adapter	Capacity Deduction (lb)
5 (ft.)	700
Pile Driver Lead Adapter	200

MAXIMUM ALLOWABLE CAPACITIES FOR 5 FOOT TIP EXTENSION

LIFTING CAPACITY TO BE THE SMALLEST OF THE FOLLOWING VALUES:

1. 18,000 lb (Maximum).
2. The standard crane lift capacity minus 700 lb for the crane configuration in use.

NOTES:

1. All notes are to be adhered to as listed on the standard lift crane capacity charts .
2. Reduce the main boom lift capacities by 700 lb when the tip extension is installed.
3. The maximum boom length on which the tip extension can be installed is 150 ft.
4. Do not lift or suspend a load from the boom tip extension and main boom at the same time.

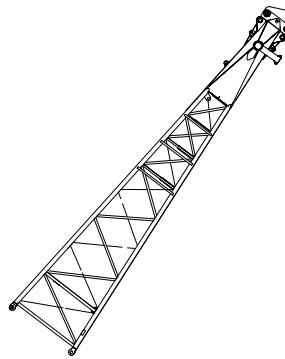

MAXIMUM ALLOWABLE CAPACITIES FOR PILE DRIVER LEAD ADAPTER

LIFTING CAPACITY TO BE THE SMALLEST OF THE FOLLOWING VALUES:

1. 70,000 lbs.
2. The standard crane lift capacity minus 200 lbs. for crane configuration in use.

NOTES:

1. All notes are to be adhered to as listed on the standard lift crane capacity charts.
2. Reduce the main boom lift capacities by 200 lb when the pile driver lead adapter is installed.
3. The maximum boom length on which the pile driver lead adapter can be installed is 150 ft.

CAUTION: This material is supplied for reference use only. Operator must refer to in-cab Crane Rating Manual to determine allowable machine lifting capacities and operating procedures.

! WARNING

READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUALS AND THE FOLLOWING INSTRUCTIONS AND CHART VALUES BEFORE OPERATING THE CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT.

OPERATING INSTRUCTIONS

GENERAL:

1. Rated lifting capacities in pounds as shown on lift charts pertain to this crane as originally manufactured and normally equipped. Modifications to the crane or use of optional equipment other than that specified can result in a reduction of capacity.
2. Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this crane must be in compliance with the information in the Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor.
3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards Institute (ANSI) safety standards for cranes.
4. All capacities listed in this book are in compliance with ASME/ANSI B30.5 at date of manufacture.

LIFT CRANE OPERATION:

1. Capacities shown are in pounds and are not more than 75% of the tipping loads with the crane standing level on firm supporting surface. A deduction must be made from these capacities for weight of hook block, hook ball, sling, grapple, etc. When using main hook while jib is attached, reduce capacities by values shown on Capacity Deductions For Lifting Off Main Boom Hook With Jib Installed. When using main hook while 5 foot tip extension or pile driver lead adapter is attached, reduce capacities by values shown on Capacity Deductions For Lifting Off Main Boom Hook With 5 Foot Tip Extension or Pile Driver Lead Adapter Installed. See Operator's Manual for all limitations when raising or lowering attachment.
2. The crane capacities in the shaded areas are based on structural strength. The crane capacities in the non-shaded areas are based on stability.
3. For recommended reeving, parts of line, wire rope type, and wire rope inspection, see Wire Rope Capacity Chart, Operator's Manual, and Parts Manual. Rated lifting capacities are based on correct reeving. Deduction must be made for excessive reeving. Any reeving over minimum required (see Wire Rope Capacity Chart) is considered excessive and must be accounted for when making lifts. Use Working Range Diagram to estimate the extra feet of rope. See Wire Rope Capacity for the weight to deduct for each extra foot of wire rope before attempting to lift a load.
4. Rated lifting capacities in this Crane Rating Manual are based on freely suspended loads and make no allowances for such factors as the effect of ground conditions and operating speeds. The operator shall therefore reduce load ratings in order to take these conditions into account.
5. Rated lifting capacities do not account for the effects of wind on a suspended load or boom.

Lifting capacities should be considered acceptable for wind speeds less than 20 mph and appropriately reduced for wind speeds greater than 20 mph. (See General Wind Restrictions Guide.)

6. The capacities listed in this Crane Rating Manual are for the crane equipped with live mast and with the gantry in the raised position.
7. The least stable rated condition is over the side.
8. Booms should be erected and lowered over the end for maximum stability. See Liftoff Capabilities before erecting or lowering boom.
9. Do not operate at radii and boom lengths where the Crane Rating Manual lists no capacity. Do not use longer booms or jibs than those listed in this Crane Rating Manual. Any of the above can cause a tipping condition, or boom and jib failure.
10. These capacities apply only to the crane as originally manufactured and normally equipped by Link-Belt Construction Equipment Company.

FOR OVER END BLOCKED CAPACITIES ONLY:

1. These capacities can be lifted over either end with the crane standing level on a firm supporting surface with adequate blocking placed under the tread member sprockets/idlers, to prevent rocking.
2. Do not travel with a load.

TRAVELING WITH A LOAD:

1. All 360° Rotation Capacities listed in this Crane Rating Manual are pick and carry capacities.
2. The boom must be pointing straight over one end of the crawler lower. If the load was lifted over the side, swing the load over the end and/or if the load was lifted at a long radius and the load is at or near capacity for that radius, boom up to obtain a greater lifting capacity before beginning travel.
3. Engage the swing lock and apply swing brake.
4. Travel slowly and cautiously on a firm and level-supporting surface.

DEFINITIONS:

1. Load Radius: Horizontal distance from a projection of the axis of rotation to the supporting surface, before loading, to the center of the vertical hoist line or tackle with load applied.
2. Boom Angle: The angle between the boom base section and horizontal with freely suspended load at the rated radius.
3. Working Area: Area measured in a circular arc about the centerline of rotation as shown on the Working Area Diagram.
4. Freely Suspended Load: Load hanging free with no direct external force applied except by the hoist line.
5. Side Load: Horizontal side force applied to the lifted load either on the ground or in the air.

WORKING AREAS

NOTES:

- For maximum boom and maximum boom + jib combinations only – adequate blocking must be placed under the side frame sprockets/idlers to prevent rocking. The ramps supplied with the crane are considered to be adequate blocking.
- Crane on firm and level surface.
- Gantry pins must be installed with the gantry in the raised position.
- For maximum stability, booms must be erected or lowered over the end with no load and with the hook block on the ground.

GENERAL WIND RESTRICTIONS GUIDE

⚠ WARNING

Failure to follow these wind speed restrictions may result in structural failure of the boom, which would cause property damage and/or bodily injury.

1. The effects of the wind force on the hook load are the responsibility of the user and are not taken into account. When hoisting any load in windy conditions, the load wind area and load controllability must be considered for safe crane operation.
2. Wind speed is to be determined at the boom top section.

DUTY CYCLE NOTES FOR TUBE BOOM

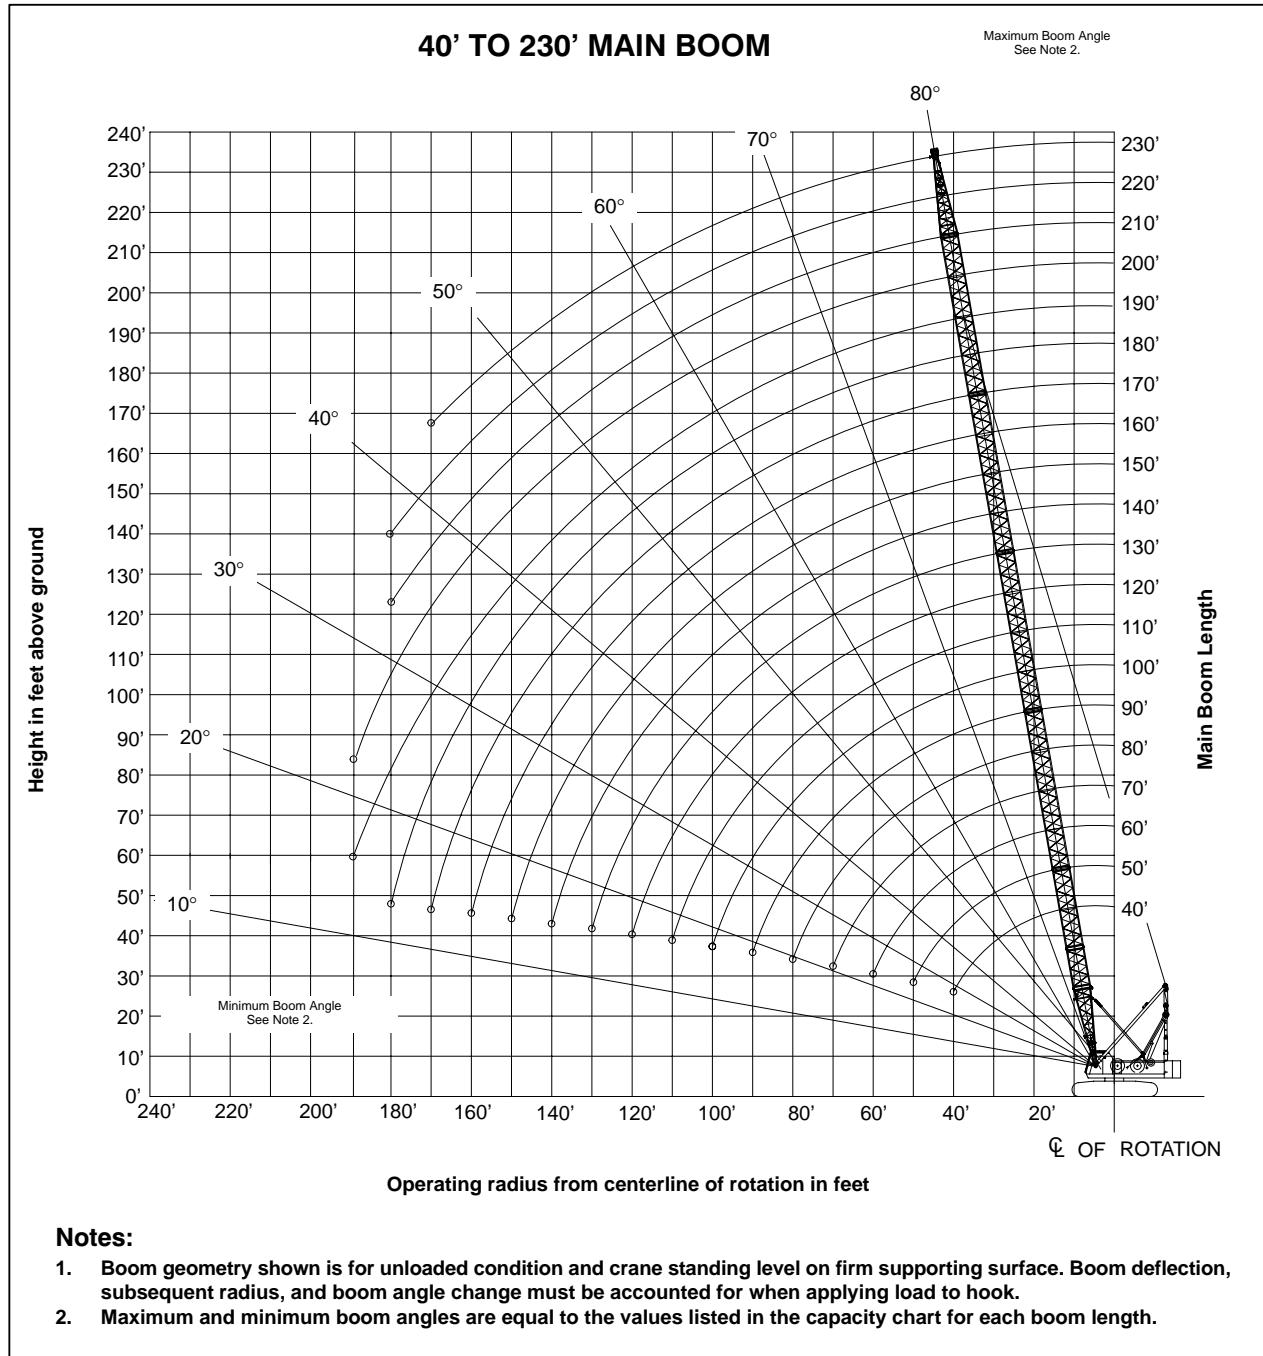

1. The capacities included in the "Duty Cycle Capacities – Tube Boom" chart are the maximum allowable, and are based on an LS-218H II crawler crane with "A" (25,350 lb.) counterweight standing level on firm supporting surface under ideal job conditions.
2. Capacities are based on 75% of minimum tipping loads for dragline; 67.5% for clamshell.
3. Capacities are maximum recommended by PCSA Standard #4. Operator must make allowances for soft or uneven supporting surfaces, rapid cycle operations, bucket suction, or other unfavorable conditions which may require smaller buckets for most efficient operation.
4. Weight of bucket plus load, must not exceed these capacities.
5. Dragline operation is not recommended with boom angles less than 35°.
6. Boom length for dragline/clamshell attachment operation should not exceed 80 ft..
7. Retractable high gantry must be pinned in the raised position for all capacities on the "Duty Cycle Capacities – Tube Boom" chart.
8. These capacities apply to the crane as originally manufactured and normally equipped by Link-Belt Construction Equipment Company.

Jib Capacities

Lattice Boom Crawler Crane

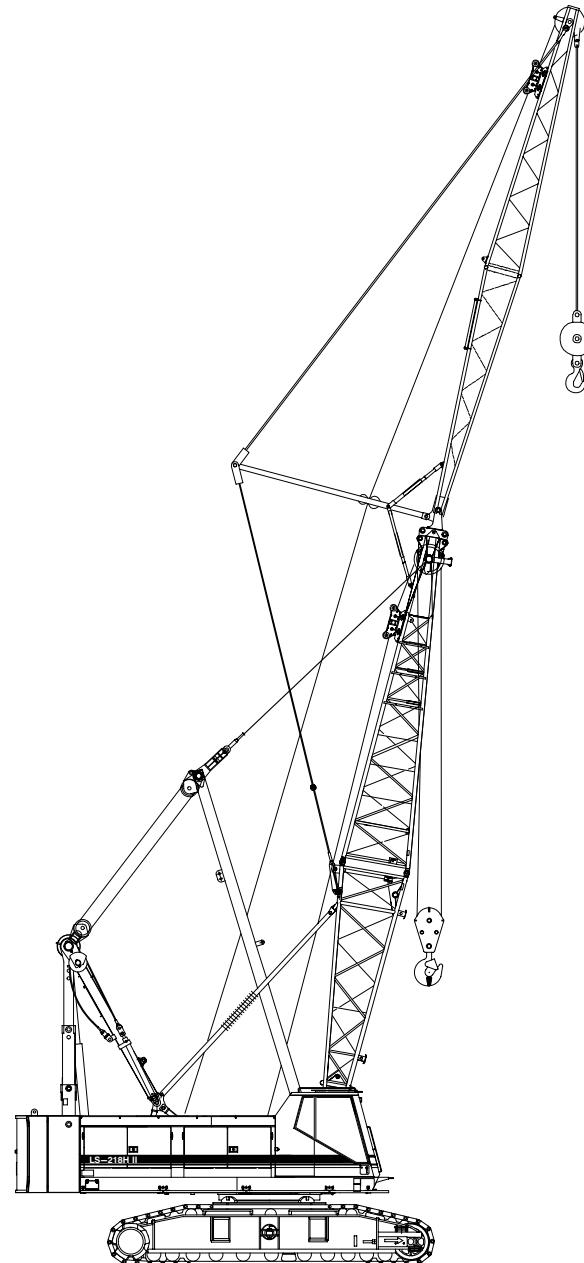

LS-218H II

100-ton (*90.72 metric ton*)

HYLAB Series

Angle Boom + Jib Capacities

- 40' – 150' (12.19 – 45.72 m) Angle Boom with 30' – 60' (9.14 – 18.29 m) of Jib
- 20' (6.10 m) Open Throat Top Section with 24" (0.61 m) Wide x 32" (0.81 m) Deep Jib
- Extended Side Frames
- Over End Blocked Capacities
- 360 Degree Capacities
- "AB" Counterweight Options
- 20' 10.5" (6.36 m) Crawler Length

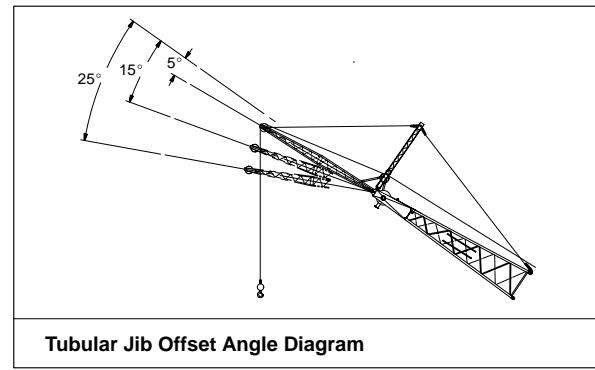

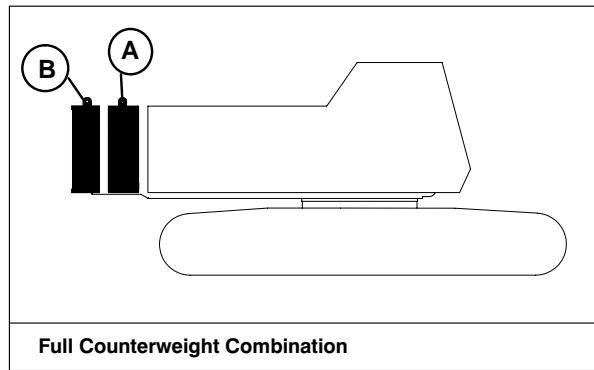

CAUTION: This material is supplied for reference use only. Operator must refer to in-cab Crane Rating Manual to determine allowable machine lifting capacities and operating procedures.

TUBULAR JIB NOTES FOR ANGLE BOOM

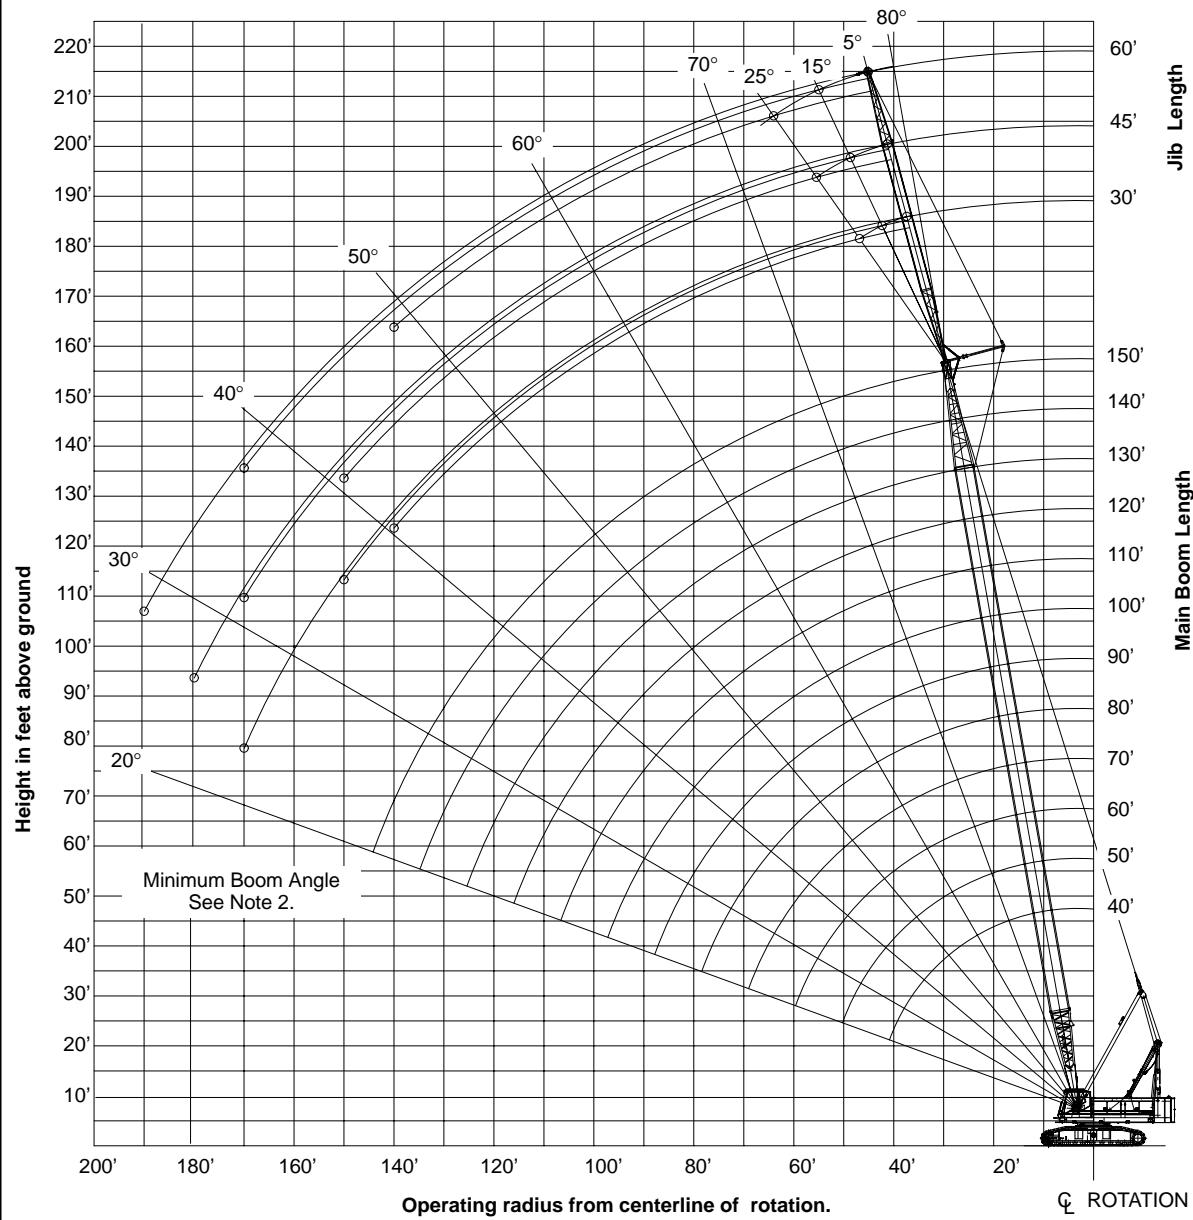

1. Capacities are for a LS-218H II crawler crane with "AB" counterweight.
2. Separate capacity charts are listed for 360° and for over end blocked crawler working areas. Apply the appropriate lift capacity chart based on the working area and the specific operating conditions.
3. Over end blocked capacities can be lifted over either end with the crane standing level on a firm supporting surface. Adequate blocking must be placed under both treadmember sprockets (or idler rollers) at the end that the load is to be lifted to prevent rocking. The ramps supplied with the crane are considered to be adequate blocking.
4. Capacities are for side frames in the extended position only and are based on the crane standing level on a firm supporting surface.
5. Capacities are limited to a LBCE 48" x 48" (1.22 m x 1.22 m) angle boom with an LBCE 12 ton, 24" x 32" (0.61 m x 0.81m) cross section tube jib with a 11'6" (3.51 m) high jib mast properly assembled.
6. Two parts of 1" Diameter Type "RB" wire rope are required for maximum lift.
7. Capacities are for 30' (9.14 m), 45' (13.72 m) and 60' (18.29 m) jib lengths only.
8. Maximum boom plus jib combination is 150' + 60' (45.72 + 18.29 m).
9. The least stable condition is over the side.
10. All capacities are listed in pounds and are not more than 75% of the tipping loads. Capacities with an asterisk are governed by factors other than those that would cause a tipping condition.
11. A deduction must be made from the jib capacities for the weight of the following: Main boom hook block or hook ball, jib hook block or hook ball, slings, grapple, etc.

WORKING RANGE DIAGRAM

40' TO 150' MAIN BOOM WITH 30' TO 60' JIB

Maximum Boom Angle
See Note 2.

Notes:

1. Boom geometry shown is for unloaded condition and crane standing level on firm supporting surface. Boom deflection, subsequent radius, and boom angle change must be accounted for when applying load to hook.
2. Maximum and minimum boom angles are equal to the values listed in the capacity chart for each boom length.

LS-218H II

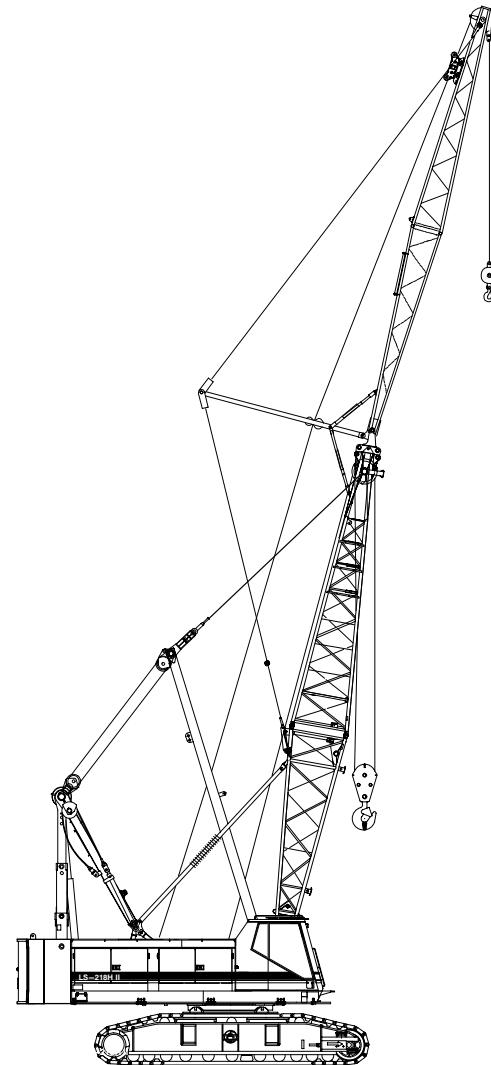

Jib Capacities

Lattice Boom (HYLAB) Crawler Crane

LS-218H II 110-ton (99.79 metric ton)

Tube Boom + Jib

- 40' – 190' (12.19 – 57.91 m) Tube Boom with 30' – 75' (9.14 – 22.86 m) of Jib
- 200' (60.96 m) Tube Boom with 30' (9.14m) or 45' (13.7 m) of Jib
- 20' (6.10 m) Open Throat Top Section with 24" (0.61 m) Wide x 32" (0.81 m) Deep Jib
- Extended Side Frames
- Over End Blocked Capacities
- 360 Degree Capacities
- "AB" Counterweight
- 20' – 10.5" (6.36 m) Crawler Length

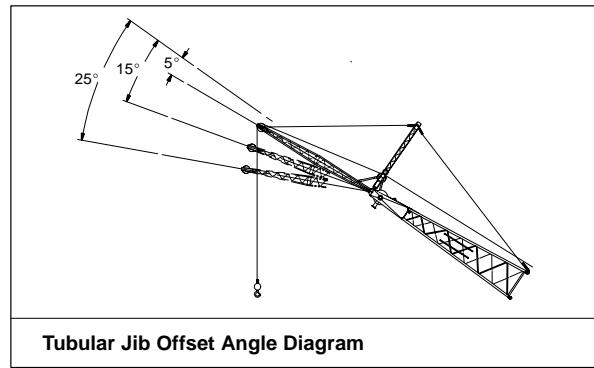

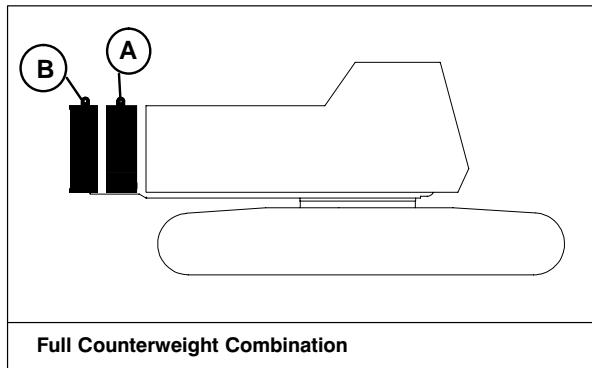

CAUTION: This material is supplied for reference use only. Operator must refer to in-cab Crane Rating Manual to determine allowable machine lifting capacities and operating procedures.

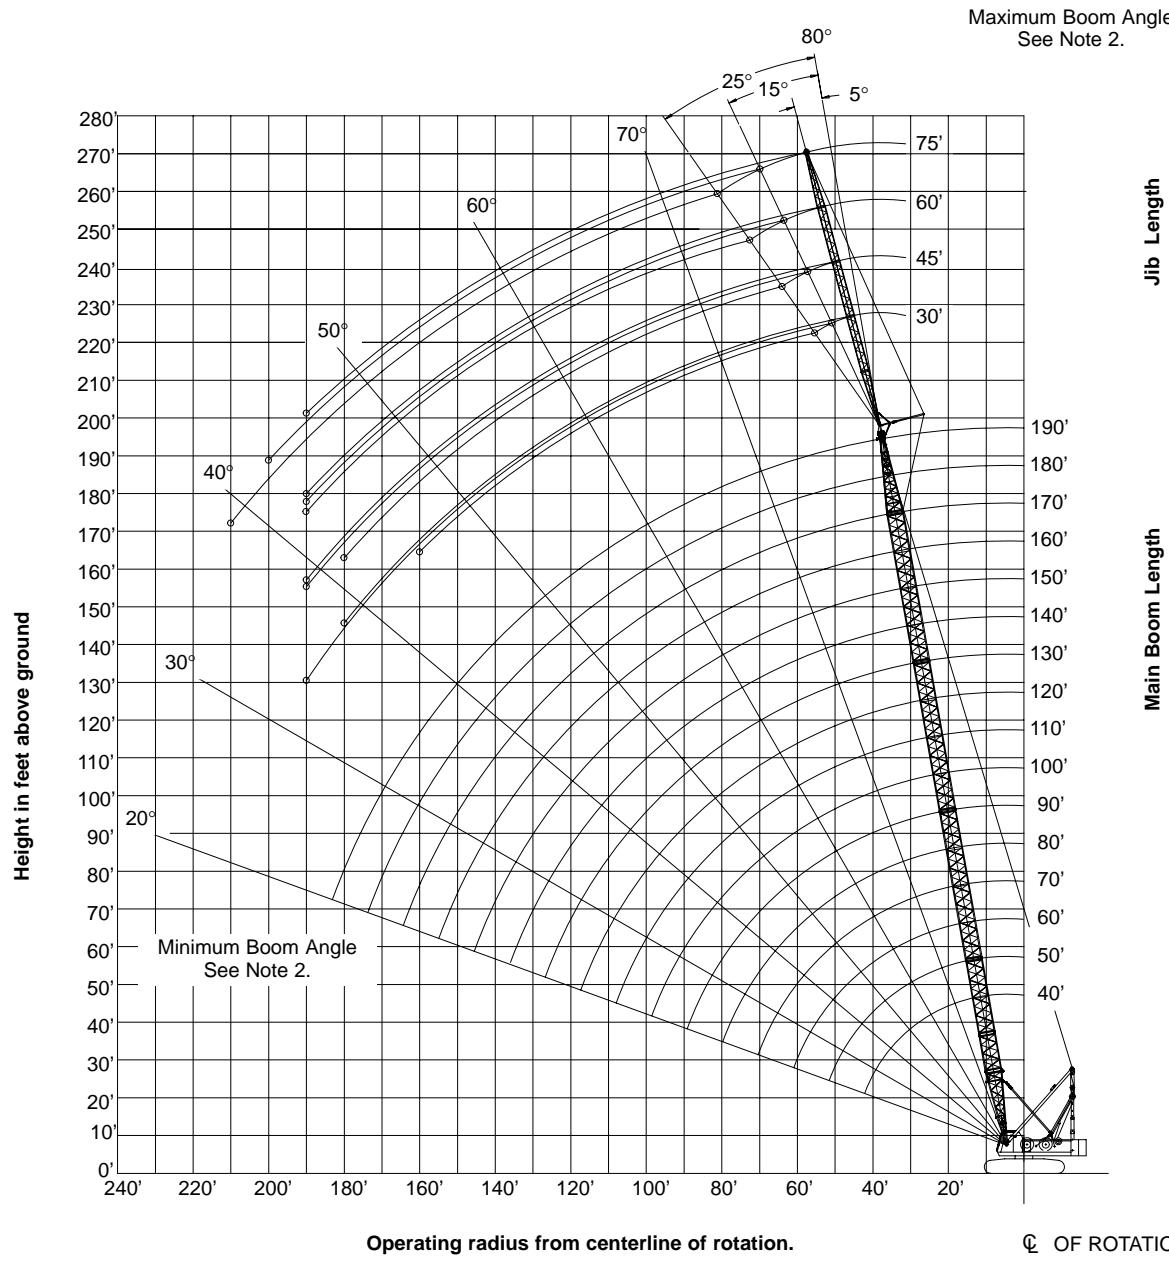

TUBULAR JIB NOTES FOR TUBE BOOM

1. Capacities are for a LS-218H II crawler crane with "AB" counterweight.
2. Separate capacity charts are listed for 360° and for over end blocked crawler working areas. Verify operating conditions as described on the Working Area Chart found in the general information section. Apply the appropriate lift capacity chart based on the working area and the specific operating conditions.
3. Over end blocked capacities can be lifted over either end with the crane standing level on a firm supporting surface. Adequate blocking must be placed under both treadmember sprockets (or idler rollers) at the end that the load is to be lifted to prevent rocking. The ramps supplied with the crane are considered to be adequate blocking.
4. Capacities are for side frames in the extended position only and are based on the crane standing level on a firm supporting surface.
5. Capacities are limited to a LBCE 50" x 60" tube boom with an open throat and a LBCE 12 ton, 24" x 32" cross section tube jib with a 11'6" high jib mast properly assembled.
6. Two parts of 1" Diameter Type "RB" wire rope are required for maximum lift.
7. Capacities are for 30', 45', 60', and 75' jib lengths only.
8. Maximum boom plus jib combination is 190' + 75' or 200' + 45'. The only jib lengths available on the 200' tube boom are 30' and 45'.
9. The least stable condition is over the side.
10. All capacities are listed in pounds and are not more than 75% of the tipping loads. Capacities with an asterisk are governed by factors other than those that would cause a tipping condition.
11. A deduction must be made from the jib capacities for the weight of the following: Main boom hook block or hook ball, jib hook block or hook ball, slings, grapple, etc.

40' TO 190' MAIN BOOM WITH 30' TO 75' JIB

Notes:

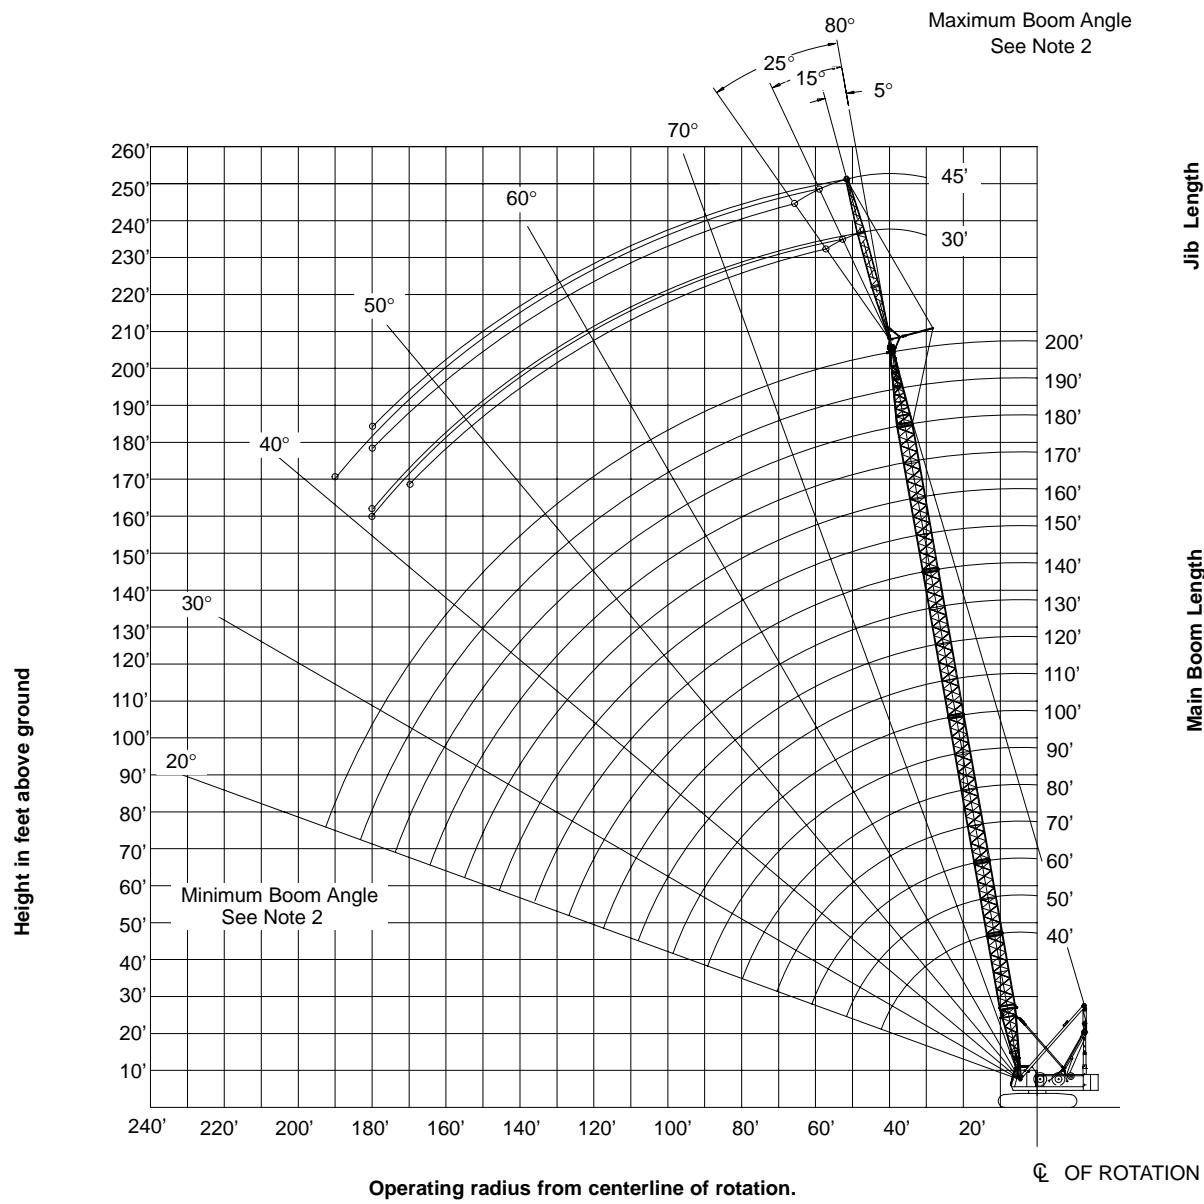

1. Boom geometry shown is for unloaded condition and crane standing level on firm supporting surface. Boom deflection, subsequent radius, and boom angle change must be accounted for when applying load to hook.
2. Maximum and minimum boom angles are equal to the values listed in the capacity chart for each boom length.

- Boom geometry shown is for unloaded condition and crane standing level on firm supporting surface. Boom deflection, subsequent radius, and boom angle change must be accounted for when applying load to hook.**
- Maximum and minimum boom angles are equal to the values listed in the capacity chart for each boom length.**

WARNING

READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUAL AND THE FOLLOWING INSTRUCTIONS AND CHART VALUES BEFORE OPERATING THE CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT.

OPERATING INSTRUCTIONS

GENERAL:

1. Rated lifting capacities in kips (1,000 pounds) as shown on lift charts pertain to this crane as originally manufactured and normally equipped. Modifications to the crane or use of optional equipment other than that specified can result in a reduction of capacity.
2. Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this crane must be in compliance with the information in the Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor.
3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards Institute (ANSI) safety standards for cranes.
4. All capacities listed in this book are in compliance with ASME/ANSI B30.5, SAE J987, and SAE J765 at date of manufacture.

SET UP:

1. For all operating conditions, the crane must be leveled on a firm supporting surface that will adequately support the loadings without settling or collapsing.

WARNING

For over end capacities and lift off of combinations with luffing boom lengths longer than 120', the idlers/sprockets must be blocked with ramps.

2. Counterweights: All luffing attachment combinations require the Maximum Counterweight Combination (AB).
3. Refer to the Operator's Manual for instructions pertaining to assembly and raising and lowering of the attachment.

LUFFING ATTACHMENT OPERATION:

1. Capacities shown in this Crane Rating Manual are in kips (1,000 pounds) and are not more than 75% of the tipping loads with the crane standing level on a firm supporting surface. A deduction must be made from these capacities for weight of hook block, hook ball, sling, grapple, load weighing device, etc.
2. When lifting from the auxiliary sheaves with the luffing jib installed, reduce capacities by the values shown on the Capacity Deductions For Auxiliary Load Handling Equipment. See Operator's Manual for all limitations when raising or lowering the attachment.
3. Do not lift more than one load at a time.
4. The crane capacities marked with an asterisk (*) are based on structural strength. The crane capacities without asterisks are based on stability ratings.

5. For recommended reeving, parts of line, wire rope type, and wire rope inspection, see Wire Rope Capacity chart, Operator's Manual, and Parts Manual. Rated lifting capacities are based on correct reeving. Deduction must be made for excessive reeving. Any reeving over minimum required is considered excessive and must be accounted for when making lifts. Use Working Range Diagram to estimate the extra feet of wire rope included in reeving. Then consult Wire Rope Capacity chart to determine the weight per foot of wire rope type. Deduct this amount for each extra foot of wire rope before attempting to lift a load.
6. Load ratings in this Crane Rating Manual are based on freely suspended loads and make no allowances for such factors as the effect of the wind on load, ground conditions, and operating speeds. The operator shall therefore reduce load ratings in order to take these conditions into account. Refer to the Wind Speed Restrictions and Job Site Travel Restrictions for safe operation, travel, and storage of the attachment.
7. Rated lifting capacities do not account for the effects of wind on a suspended load or boom. Lifting capacities should be considered acceptable for wind speeds less than 25 MPH and appropriately reduced for wind speeds greater than 25 MPH. Extreme caution should be used when lifting heavy loads or loads with large wind sail area under high wind conditions (over 25 MPH). See Wind Restriction charts in this manual for appropriate capacity reductions.
8. The 26 ft luffing boom live mast must be used for all capacities shown in this Crane Rating Manual.
9. Retractable high gantry must be pinned in raised position for all capacities in this manual.
10. The least stable rated condition is over the end with **unblocked** sprockets and idlers.
11. Refer to the enclosed charts for allowable attachment liftoff lengths and allowable working lengths at the various luffing boom angles.
12. Do not operate at radii or boom lengths where this Crane Rating Manual lists no capacity. Do not use longer booms or jibs than those listed in this Crane Rating Manual. Any of the above can cause a tipping condition or boom and jib failure.
13. When traveling with a load, refer to Job Site Travel Restrictions With A Load information and be sure to follow all of the guidelines listed in the Operator's Manual.
14. Only boom extensions with the "HP" designation may be used as part of the luffing boom.
15. When the 50' basic luffing jib is installed, the hook block and rigging must weigh a minimum of 1,800 lb to prevent the luffing jib from overhauling when operating near the minimum rated radius.

AUXILIARY SHEAVE NOTES

- Capacities are for a LS-218H II Crawler Crane with AB upper counterweight.
- Capacities are for working areas as described on the Working Areas Chart found in the General Information section of this Crane Rating Manual and are based on the crane sitting level on a firm supporting surface.
- Capacities are limited to an LBCE 50" x 60" tubular boom with a luffing boom top.
- Capacities are for luffing boom lengths between 80 feet and 140 feet.
- The least stable condition is over the end with **unblocked** idlers and sprockets.
- All capacities are in kips (1,000 lb) and are not more than 75% of the tipping loads. The capacities followed by an asterisk are governed by factors other than those that would cause a tipping condition.
- The appropriate deduction must be taken if any luffing jib components are installed. See the Capacity Deductions for Auxiliary Load Handling Equipment for more information.
- If the luffing jib is installed, the minimum luffing boom angle is 65 degrees. The maximum boom angle is 80 degrees when using the auxiliary sheaves.
- The luffing jib should be set to a 15 degree offset when using the auxiliary sheaves.

JOB SITE TRAVEL RESTRICTIONS WITH A LOAD

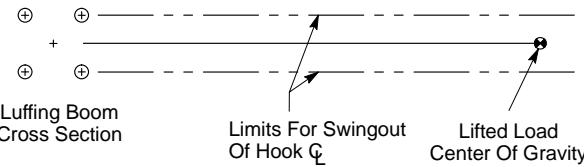

Guidelines:

1. The travel surface must be firm and uniformly compacted. The travel surface must be capable of supporting the crane's ground bearing pressure under the exact crane configuration (including suspended load) being used.
2. Maximum crane gradeability (fore and aft) = 5%
3. Maximum crane list (side to side) = 1%
4. Travel with the crane upper in-line with the crawlers (straight over the end). Do not swing and travel at the same time. Do not hoist and travel at the same time. Operate all crane functions independently.
5. Travel with the travel drive motors towards the rear.
6. The swing lock must be engaged.
7. Travel with load must not to be done under adverse weather conditions, or conditions of poor visibility.
8. The wind speed must be less than 10 mph. The suspended load's wind sail area can greatly increase the wind loading. Therefore, the operator shall reduce the load ratings to account for this condition.
9. Block and steer with the load suspended is the recommended method of turning the crane. Counter-rotating should only be used if no other options are available. Turning must be performed as smoothly as possible to reduce the amount of shock to the attachment.

CAUTION

Rapid movements of the crane can side load or shock load the luffing attachment. Perform all crane functions smoothly and slowly.

10. When traveling on a grade, position the counterweight up the grade and raise the luffing boom the corresponding angle (degrees) of the grade to be traveled.
11. When traveling or swinging with the load, the load must be kept within the outline of the luffing boom as shown below. Do not allow the load to swing outside imaginary lines drawn through each luffing boom cord.

Traveling or Swinging With Load

Allowable Loads When Traveling

1. The luffing boom must be positioned at 80°, 75°, or 70° only, with the crane sitting on a level surface.
2. The luffing jib must be positioned between a 30° and 60° angle.
3. The crane may be traveled with a load with any luffing boom attachment up to the maximum lengths listed below. There must be a rating listed on the 360 Degree capacity chart (Section 4) for the angles listed above. The luffing boom and luffing jib must be positioned at the proper angles listed in the capacity chart.

Luffing Boom Lengths	Luffing Jib Lengths
80' – 120'	50' – 100'

4. **Travel with up to 75% of the rated capacity is permitted.**
5. The load must be suspended from either the auxiliary sheaves or the luffing jib sheaves.
6. Refer to the Operator's Manual for more information.

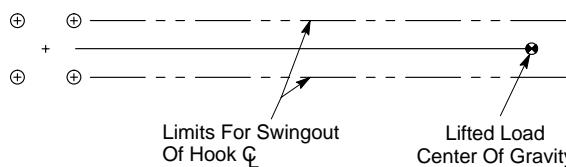

JOB SITE TRAVEL RESTRICTIONS WITHOUT A LOAD

1. Travel with the luffing jib folded under and latched to the luffing boom is permitted only when the luffing boom is at a 75 degree luffing boom angle.
2. Travel is prohibited at luffing boom angles greater than 85 degrees.
3. If a luffing attachment combination has a capacity listed for a given radius and the luffing boom angle is less than 85 degrees, travel without load is permitted in that configuration.

WIND SPEED RESTRICTIONS

1. Failure to follow these wind speed restrictions may result in structural failure of the luffing attachment, or loss of stability, which would cause property damage and/or bodily injury.
2. **It is the responsibility of the user to take into account the effects of the wind force on the hook load.** When hoisting any load in windy conditions, the load wind sail area and load controllability must be considered for safe crane operation. The suspended load's wind sail area can greatly increase the wind loading. Only the user is cognizant of the suspended load's wind sail area.
3. Do not allow the load to swing outside imaginary lines drawn through each luffing boom chord during all crane functions.
4. **Wind speed is to be determined at the luffing boom cap (or higher).** A wind speed indicator is supplied with the luffing attachment to measure the wind velocity. Do not rely on local weather forecasts for wind velocity. **Wind velocity increases with height and may be much higher at the luffing boom cap than on the ground.**

5. The wind velocity limitations listed in the table are based on maximum allowable wind gusts (instantaneous wind velocity). When in doubt, use the next higher wind velocity range.

WIND SPEED CHART	
Luffing Boom Lengths: 80' (24.4m) to 110' (33.5m)	WIND SPEED
Luffing Jib Lengths: 50' (15.2m) to 100' (30.5m)	
1. Normal Lifting Operation. (Refer To Crane Rating Manual)	0-25 mph 0-40.2kmh
2. Reduced Operation. Capacities Must Be Reduced By 50%.	26-40 mph 41.8-64.4kmh
3. No Operation. Store Attachment On Ground.	Over 40 mph Over 64.4kmh
4. Job Site Travel. (Refer To Job Site Travel Restrictions)	0-15 mph 0-24.1kmh
Luffing Boom Lengths: 120' (36.6m) to 150' (45.7m)	WIND SPEED
Luffing Jib Lengths: 110' (33.5m) to 140' (42.7m)	
1. Normal Lifting Operation. (Refer To Crane Rating Manual)	0-25 mph 0-40.2kmh
2. No Operation. Store Attachment.	26-40 mph 41.8-64.4kmh
3. No Operation. Store Attachment On Ground.	Over 40 mph Over 64.4kmh
4. Job Site Travel. (Refer To Job Site Travel Restrictions)	0-15 mph 0-24.1kmh

6. To minimize the side load due to wind on the attachment, whenever possible, position the crane so the wind is blowing toward the rear of the attachment.
7. If the wind is expected to be such that the preceding set of restrictions cannot be complied with or job site conditions will prevent the lowering of the luffing jib and luffing boom, consult the Link-Belt Service Department before the luffing boom attachment is assembled.
